

# MENULINK

## RELEASE PROFILE

Release Content 5.11

General Release

Enhancement releases provide innovative, good-for-industry features that deliver bottom-line performance improvements for Radiant customers. We provide enhancement releases that accelerate high return on your technology investment by focusing on Inventory and Labor cost reduction.

### SYSTEM MANAGEMENT ONLINE HELP

The User Guide is now available online. This provides an easy to use reference tool – all at the touch of a button! Now, when working with System Management, administrators can navigate to the User Guide to better understand the details on new and existing features.

### CUSTOM EMPLOYEE FIELDS

We previously introduced custom fields for both vendors and sites. With Custom Fields, companies have the flexibility to populate data that is customized for their needs. With v5.11, we have added five custom fields on the employee profile.

For our Aloha POS Users, these fields are also included in the employee export to the site level Aloha system.

### MENU MODELING UPDATE

A great new look is here! The MenuLink Menu Modeling user interface has been enhanced with new sophisticated graphics.

### TAX PERCENTAGE ALLOCATION

We understand purchasing departments may have company specific requirements for the handling of sales tax on invoices. This new functionality gives an additional tax allocation option with the ability to assign a specific % of sales tax to a geographic region and to include all items assigned to a specific raw material category.

### TIP SHARE DISTRIBUTION – MID SHIFT EMPLOYEES

Employees who participate in tip share distribution often work shifts that span day parts. The automatic Tip Share Distribution now calculates the

day part tip share for employees that are still on the clock when the tip share is being allocated.

### COMMISSARY

The MenuLink Purchase Management product has been enhanced to deplete the raw materials that are included in a recipe when prep items are sent from the commissary to the stores. This enhancement will provide an additional level of accountability to ensure product usage is accurate based on production.

### INTERNATIONAL

The French Canadian translation has been updated.

### CD INSTALLATIONS ARE HERE

MenuLink can now support an installation directly from a CD rather than through the standard process during log-on. This option is perfect for the mass deployment of the MenuLink products as well as sites where bandwidth might be less than optimal.

### IMPROVED EXCEPTION HANDLING

For those very important support teams, we have made it easier for our users to report valuable message information. The new messaging provides a copy feature so the information can be easily passed to the appropriate support team.

### STANDALONE LAB INSTALLATION

As part of our automated lab and training system installation, we have included the creation of a shortcut for the desktop.

### REPORT DATA SEARCH

Searching just got easier! When previewing any MenuLink report, we have enhanced the ability to find important data by highlighting your search results in an easy-to-read bold yellow color.

### REPORT – SCHEDULE VS ACTUAL

We continue to add new drillable and sortable reports. With v5.11, MenuLink now supports a drill-down version of the Schedule vs Actual report. This great report drills into job code detail to allow managers to analyze performance of scheduling against the actual labor.

### REPORT – UNFINALIZED INVOICES

MenuLink added the ability to finalize invoices in the 5.9 release. This great new process adds an additional layer of invoice review to ensure all purchases are accurate and timely prior to the close of your accounting period. With this new report, we have streamlined the process with the ability to quickly review any invoices which have not been finalized.

### REPORT – AVERAGE STATUTORY PAY

We have added a new suite of reports specifically for our Canadian clients. These reports can be used to determine average hours per shift or average hours/days worked as well as a percentage when calculating holiday pay.

### OPTIMIZATION

Performance optimization is top priority with the following enhancements

- When creating and editing schedules, we have optimized the performance.
- The very popular “Copy Schedule” function has been enhanced to exclude shifts assigned to inactive employees, including terminated employees and employees who are no longer borrowed.
- When saving the Order by Vendor item assignment, we have restructured and enhanced the amount of data that is processed.

### XPIENT – EMPLOYEE EXPORT

The Xpient POS export has been enhanced to include inactive job code status as well as pay rate changes.
